

Tiger, Goat, and Cabbage

A man is traveling with a tiger, a goat, and a cabbage. The man came to a river that was too wide to swim across. He noticed a small boat tied to the shore, but the boat was only large enough so he could row across with one belonging at a time.

The problem he faced was that if the goat was left alone with the cabbage, then the goat would eat the cabbage. Further, if the tiger was left alone with the goat, then the tiger would eat the goat.

How can the man cross the river safely with all his belongings in tact?
